

DISASTER RECOVERY AS A SERVICE (DRAAS)

Replication, Storage, Protection, Retention

Have 365 Data Centers help write your disaster recovery strategy specifically designed around your company's needs.

Server and data recovery is part of a bigger picture.

We will help you through your disaster recovery planning process!

Having a detailed written disaster recovery (DR) plan for your network is essential to every organization. Failover of the servers is just part of a larger DR plan. We can work with you to provide consultation and advisory services. We will write out detailed recovery steps and play out real world disaster scenarios.

Bring your IT back to normal after a disaster with the experienced team at 365 Data Centers!

- What are the applications that need to be in the DR plan and what are their priority?
- What is the fail-over process for each application
- What servers are highest priority and the order that they should be brought online and tested?
- What steps need to be taken after the DR site is brought online?
- What is the testing procedure for each application to verify it's working properly and that data is validated?
- How do you want your users to access the DR environment? VPN tunnel, Remote Desktop Server, virtual desktops, etc.? Documentation should be written and distributed to users on these procedures.
- All users should know where they will be working from in the event of a disaster, both primary and alternative.
- All users should know who are the members of the DR response team
- All procedures should list who is the responsible party - The customer, 365 Data Centers or other.
- How do you recover from the disaster?

Examples of 365 Data Centers' Disaster Recovery (DR) planning:

- DR office space and suites available
- Fast internet connectivity direct to your cabinet
- Category 5 Hurricane facility
- 24x7 local support
- Clearly defined communication channels
- DR application access planning
- Application and server monitoring
- DR plan testing

Make sure your company is prepared and protected.

Call 365 Data Centers today to talk through your specific IT requirements.
