

365 Data Centers operates its own private enterprise Backup-as-a-Service (BaaS) for its clients worldwide and across its high-speed, low latency US-based network. Data is everything and having rapid and reliable access to data recovery services is critical for continued business operations. As a member of the Veeam Cloud Service Provider (VCSP) program, 365 Data Centers now offers the best-of-breed data protection services available in the industry.

DATA PROTECTION PHILOSOPHIES

Data Resiliency

All backup data is stored in checksum-based storage repositories. This protects the data against silent bit error corruption providing maximum fidelity and recoverability of all your critical data.

Data Security

All backup data is encrypted in-flight and at-rest using strong industry standard AES 256-bit data encryption in order to comply with GDPR, HIPAA, and other regulated industry requirements.

Data Redundancy

All backup data is stored in repositories which utilize N+2 redundancy with ultra-rapid recovery capabilities to prevent data loss due to component failure.

Data Survivability

365 Data Centers supports the 3-2-1 rule regarding data survivability: three copies of your data on two different types of media with one backup at an offsite location.

OTHER KEY HIGHLIGHTS

- 10 geographically diverse and secure data center locations in the US
- Rigorous security and protocol standards: HIPAA, PCI DSS, SSAE 16, SOC 2, VISA and ISAE 3402
- 24/7/365 enterprise support teams
- Connected via fully redundant US high-speed, low latency backbone with over 350 peers
- 100% power SLA guarantee
