A Cloud-Ready Business Continuity and Disaster Recovery Solution

365 Data Centers is Dedicated to Keeping You and Your Data Connected and Protected™.

To continue to meet and exceed this goal, 365 Data Centers has partnered with Zerto to offer Virtual Replication – a best-of-breed solution that has transformed the disaster recovery landscape by delivering enterprise class, hypervisor-based replication. 365 Data Centers delivers a cloud ready, secure disaster recovery solution for mission-critical applications. Our Disaster Recovery as a Service (DRaaS) solution extends the useful life of hardware and software assets, increasing ROI. The solution is very simple to use and makes failover, failback and disaster recovery testing easy, which significantly reduces operational costs.

This dependable, state-of-the-art solution allows for peace of mind while also meeting your compliancy needs. The benefits include:

- *Seamless Scalability: Deliver consistent protection, even as your environment grows*
- *Customized RTO/RPO options based on specific needs*
- *Simplified pricing models*
- *A fully managed solution so you can focus on core business requirements*
- *Replicate from your virtual environment or ours*
- *Minimize risk by seamlessly integrating with existing infrastructure*
- *Consistent protection while supporting your growth and revenue objectives*
- *Automated application protection by utilizing replication technology*

A Cloud-Ready Business Continuity and Disaster Recovery Solution

Findings from the the Disaster Recovery Preparedness Council show that 73% of respondent organizations worldwide are not taking adequate steps to protect their data and IT systems leading to more than \$5M worth of critical applications failure, data center outages and data loss.

- Disaster Recovery Preparedness Council

According to a TechTarget survey, the consensus within the DR industry is that most enterprises are still ill-prepared for a disaster. According to the Disaster Recovery site, "Despite the number of very public disasters since 9/11, still only about 50 percent of companies report having a disaster recovery plan. Of those that do, nearly half have never tested their plan, which is tantamount to not having one at all."

- TechTarget, Disaster Recovery Plan

A Competitive Advantage for Disaster Recovery

The flexibility and agility of a cloud-based infrastructure provides a clear competitive advantage. A dynamic environment enables businesses to respond to changing market and business requirements quickly - which is something legacy business continuity solutions cannot provide. 365 Data Centers' DRaaS solution was purpose-built for virtualized environments, which focuses not only on recovery, but also on resiliency in the event of a disaster.

FEATURES

Hypervisor-based Replication

Continuous block level replication across hypervisors and across multiple sites

Granular, VM-level Protection

Protects exactly what is needed - VMs and Virtual Machine Disks (VMDKs)

Full Orchestration

Managed failover, failback, reverse protection and disaster recovery testing

Continuous Data Protection

Recover from any disruption with checkpoints available every couple of seconds

Complete Data Protection

One solution for BC/DR across storage and hypervisors with retention plans

Aggressive Service Levels

Realize recovery point objectives of seconds and recovery time objectives of minutes

Protect Production Workloads

Ensure application consistency with groups of VMs which are protected, managed, replicated and recovered as one entity

Storage Agnostic Replication

Remove barriers to entry with storage independent replication
